Experience

JPMorganChase

New York, NY

Software Engineer | Java, Spring Boot, Angular, React, TypeScript, Oracle DB, Jenkins

Aug 2023 – Present

- Owned the onboarding, address, and phone/email workflows, ensuring accurate and timely processing of 24,000+ audited approval tickets/year for 2,000+ wealth-management advisors serving high- and ultra-high-net-worth clients worldwide
- Built a data-distribution screen giving tech teams and users clear insight into downstream service failures, with in-app retry/skip that halved incident resolution time and prevented ticket backlogs
- Reduced production incidents from failed ticket processing by more than 80% with batch-job retry mechanisms and new failure logging, eliminating manual remediation and minimizing disruption to advisors processing client changes
- Optimized the address workflow's backend by refactoring its JSON retrieval logic, cutting load times on data-heavy tickets by 60% and memory usage by 50% for faster ticket processing across operations teams
- Led the migration of 20+ Java service integrations to Kerberos authentication, simplifying certificate management by eliminating recurring manual renewals and retiring end-of-life dependencies with zero production disruption
- Cut \$75,000/year in data-center costs by decommissioning a legacy account-maintenance system and consolidating its workflows into a React and Spring Boot microservices app, improving maintainability and trimming build times by 30%
- Modernized the entire advisor questionnaire workflow from Angular to React, migrating 20+ components and adding validation and inline guidance that reduced advisor errors and downstream audit rework

Software Engineer Intern | React, Redux, TypeScript, REST APIs

Jun 2022 – Aug 2022

- Built a proof-of-concept app in React to modernize a legacy desktop Loan Editor for packaging and selling home loans to investors, later adopted as the foundation for its modern-stack rebuild
- Developed a data-driven UI that dynamically renders loan data from multiple REST API endpoints, with Redux state management giving users a flexible, reliable way to manage loans and remediate data-quality issues

Projects

OutlierTracker | TypeScript, Node.js, PostgreSQL, React, PWA

Apr 2026 – Present

- Built a stock and price tracker for a fashion retailer's storefront where limited-stock items sell out fast, using public Shopify GraphQL and Sanity CMS APIs with adaptive polling from 5-minute to 5-second intervals during weekly drops
- Designed a Web Push notification pipeline delivering 21 alert types across iOS/Android/desktop PWAs, surfacing restocks and price drops within seconds with per-user and per-product controls
- Built a live stock grid, per-variant price and stock history, and drop-schedule views across 1,200+ products and 10,000+ size/color variants

Skills

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML, CSS

Frameworks & Technologies: Spring Boot, React, Angular, Node.js, REST APIs, GraphQL, Microservices, JUnit, Jest, SCSS, Bootstrap

Tools & Platforms: Jenkins, CI/CD, Git, Maven, SonarQube, Postman, JMeter, Splunk, Dynatrace, Grafana, PostgreSQL, Oracle DB, Microsoft SQL Server, Vercel, Railway, Supabase

Education

University of California, Merced

Bachelor of Science in Computer Science and Engineering

May 2023
